

MINDSYSTEMS AMODE[®]

Version 2

The smart all-in-one information management solution
Info Management | Visual ThoughtMaps | Project Plans

Release Notes:

Mindsystems Amode V1: Build 2203

Release Date: 25th Sept 2009

Bug Fixes:

Unknown Connection Error – On Vista PCs with UAC problems (common for Vista), MSSOAP caused activation issues when communicating with Mindsystems activation servers. This produced a error popup saying "Unknown Error" or "Unable to Communicate with Server". We have eliminated this problem by removing use of Microsoft's MSSOAP and creating our own protocol.

XP SP3 Rendering – Stability routines added for Briefcase Mode.

Topic Numbering – First digit adopted the text colour of the topic box (should always be black).

Enhancements:

Gantt Summary – Accessed from the Gantt Total Bar in 'Gantt Mode'. Click the 'Gantt Summary' orange button to display a project summary. You can see costings, progress, quotes, usage and resources.

Resource Summary - In 'Master Resources' next to each resource we have added a 'I' icon. Clicking on this launches a summary specific to that resource, showing tasks and costs. This is useful if you need to see all tasks assigned to a particular resource and/or generate a task list.

Usage Field - Usage field in 'Timeline Control' shows the percentage a resource is used during the task timeframe. For example, if you have a task that runs this week and you assign Adam to work on it at 100%, when looking at any other tasks that overlap (ie. other tasks also running this week), Adam will appear as 100% used. If you look at a task that runs next week Adam will appear 0% used because he is not assigned to anything during that time frame.

Search Engine Speed - Search function redesigned to produce speed increase of approximately 45% on text groups of 1000 or more words.
